EDUCATION

Oklahoma State University

Aug. 2019 – May. 2023 (Expected)

Ph. D., Major in Industrial Engineering & Management, Minor in Statistics. GPA: 4.0/4.0

Stillwater, OK, USA

- *Dissertation Topic: Advanced Data Analytics-based Quality Assurance for Smart Manufacturing*

Xi'an Jiaotong University

Aug. 2015 – Jun. 2019

Bachelor of Engineering in Mechanical Engineering. GPA: 3.7/4.0

Xi'an, Shaanxi, China

SKILLS

Programming: Python (PyTorch, TensorFlow), R, MATLAB **Language:** Mandarin (native), English (fluent), German (basic)

Hardware: Raspberry Pi

Modeling: Autodesk Inventor, Autodesk CAD, Solidworks

Quantitative Methodologies: Statistical Process Control, Supervised Learning, Self-supervised Learning, Data Augmentation, Model Compression, Markov Decision Processes, Time Series Analysis, Bayesian Modeling, Hypothesis Test

EXPERIENCES

Oklahoma State University *Research Assistant*

Aug. 2019 – Present

- **Data quality assurance:** A blockchain-enabled approach for cyber-physical security protection in manufacturing
 - Incorporate blockchain for important file (G-code)/data (stream data) storage using **Python**. Via mismatch of hash value in blocks, malicious modification on files could be detected timely and accurately
 - Apply **asymmetry encryption method** to encrypt files and design a **camouflage method** to camouflage ciphertext, which could further reduce risk of unauthorized access on files
- **Design quality assurance:**
 - Extract surface morphology feature based on **neural network (autoencoder)** via **TensorFlow** and conventional statistics
 - Correlate extracted features with machine parameters using **random forest** classifier in **scikit-learn**
- **Process quality assurance:** Develop machine learning-based methods to enhance the *in-situ* monitoring performance
 - Set up experimental platform; collect *in-situ* printing vibration signal via accelerometer and **Raspberry Pi**
 - Apply **LSTM-autoencoder** to extract feature from vibration signal; utilize **adaptive boosting** classifier for supervised monitoring and **OCSVM** to construct **EWMA chart** in **R** for unsupervised monitoring based on extracted feature
 - Propose a **data augmentation** method based on **Generative Adversarial Network (GAN)** which can generate more high-quality anomaly data for classifier training in order to enhance the anomaly detection performance
 - Incorporate **knowledge distillation** framework in decentralized system to improve efficiency of neural network while preserving data privacy via **PyTorch**

SELECTED HONORS AND AWARDS

- Outstanding Graduate Student, School of Industrial Engineering and Management, Oklahoma State University, 2022.
- NSF Student Support Award, North American Manufacturing Research Conference (NAMRC) 49, 2021.
- Data Challenge Competition Finalist, Quality, Statistics and Reliability (QSR) Section, INFORMS Annual Meeting, 2019.
- Second Prize, National Collegiate Mechanical Product Digital Design Contest, Ministry of Education, China, 2018.
- First Prize, National College Students Mathematical Modeling Competition Undergraduate Group Shaanxi Division, China, 2017.
